Nonevaluative ... the world's literature in ... and related disciplines

... PSYCHOLOGICAL ASSOCIATION

Essential tool for working with Psychological Abstracts and all PsycINFO Database Services

Thesaurus of Psychological Index Terms

3RD EDITION

Expanded third edition includes almost 300 more terms and new Scope Notes feature

Designed to direct you to the facts you seek, the *Thesaurus of Psychological Index Terms* indicates which specific terms to use in researching *Psychological Abstracts (PA)*, the PsycINFO Database or any of the allied services.

Basically a compilation of the vocabulary used in psychology and related disciplines, the *Thesaurus* covers terms generated for use in *PA* and the PsycINFO Database.

Relationship Section

An alphabetical listing of all index terms includes cross-references and broader, narrower, and related terms.

As a new feature, Scope Notes are included for one-third of the terms in the Relationship Section. These Scope Notes define the parameters of the index terms and help refine searches, leading to greater accuracy and more sharply define results.

Rotated Alphabetical Section lists terms under *all* key words

If the material you seek concerns Human Biological Rhythms, the entire term will be shown three times, so you will find it under H for Human *or* B for Biological *or* R for Rhythms.

This facilitates finding the material you need and guides you to related information you might otherwise have overlooked.

Clinician, practitioner, educator, student, librarian or information specialist, if you work with *Psychological Abstracts* or any of the PsycINFO services, the *Thesaurus* will be a practical day-in, day-out aid. The publication is priced at $40.00.

Index terms, selected from the *Thesaurus of Psychological Index Terms*, represent the literature covered in the last six issues of *PA*. Subject matter content determines the specific terms used and thus, not every thesaurus term will appear in every index. See and See Also references are present to direct the user to the preferred terminology or related areas of interest. Index phrases are alphabetically arranged under the appropriate index terms and represent a concise statement of the article's content or, when appropriate, identify the independent and dependent variables described in the material as well as the subject population. Style changes such as the increased use of abbreviations, the elimination of some hyphens, and the decision to capitalize Black and White when referring to subject population will be reflected in some inconsistencies and may affect alphabetical order of phrases.
